RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 28 pages. Original publisher: Cleveland, Ohio : NASA Lewis Research Center, 1990 OCLC Number: (OCoLC)60249107 Excerpt: . . . Wemayusetable4 to find the n and k which minimize C . However, we may also use it to compare different subsystems. Suppose that we could build, or purchase from supplier 1, a one module subsystem capable of full power for $c_3 1$ with $p . 8$. Suppose further that supplier 2 could build a similar subsystem but with $p . 95$ for $c_3 2$. A third subsystem from supplier 3 has $c_3 5$ with $p . 999$. Here we will assume that more complicated subsystems will all increase by $g (k) (1 k 7$. To compare the 3 suppliers compare the optimal subsystems from each. The first entry in table 4 shows, for the first supplier with $c_3 1$ and $p . 8$, that the optimum solution ($n 16$ and $k 7$) is to build a subsystem of 16 modules, each $1 7$ th of full power. The cost of building this subsystem is $nc_3g (k) k 16 \times 1 (1 7 7 4....$
